

PHYLLOXERA: Sarah Bird outside the Naracoorte heat shed.

Stop spread in Heat Shed

YOU can prevent the spread of phylloxera for only \$55.

That's the cost of using the Heat Shed in Naracoorte to disinfest machinery and equipment when moving it between vineyards, regions or states - if you're an accredited user.

Based at the Naracoorte saleyards, the heat shed is an increasingly popular facility for grapegrowers in the Limestone Coast and beyond.

"More and more growers and contractors are using it when they are moving machinery or equipment between the Limestone Coast and other regions in SA, and when moving machinery and equipment out of SA," said Sarah Bird from Sunbird Viticulture, who manages the heat shed for Vinehealth Australia.

"It's really a best practice activity for growers who want to ensure they are ticking all the boxes when it comes to the cleanliness of their equipment and the safety of their vineyards."

Phone Sarah on 0429 430 641 to make a booking.

Bookings can be on weekdays and weekends.
