

## VINEYARD FLOOD MODELLING MAPS FOR RIVERLAND GI

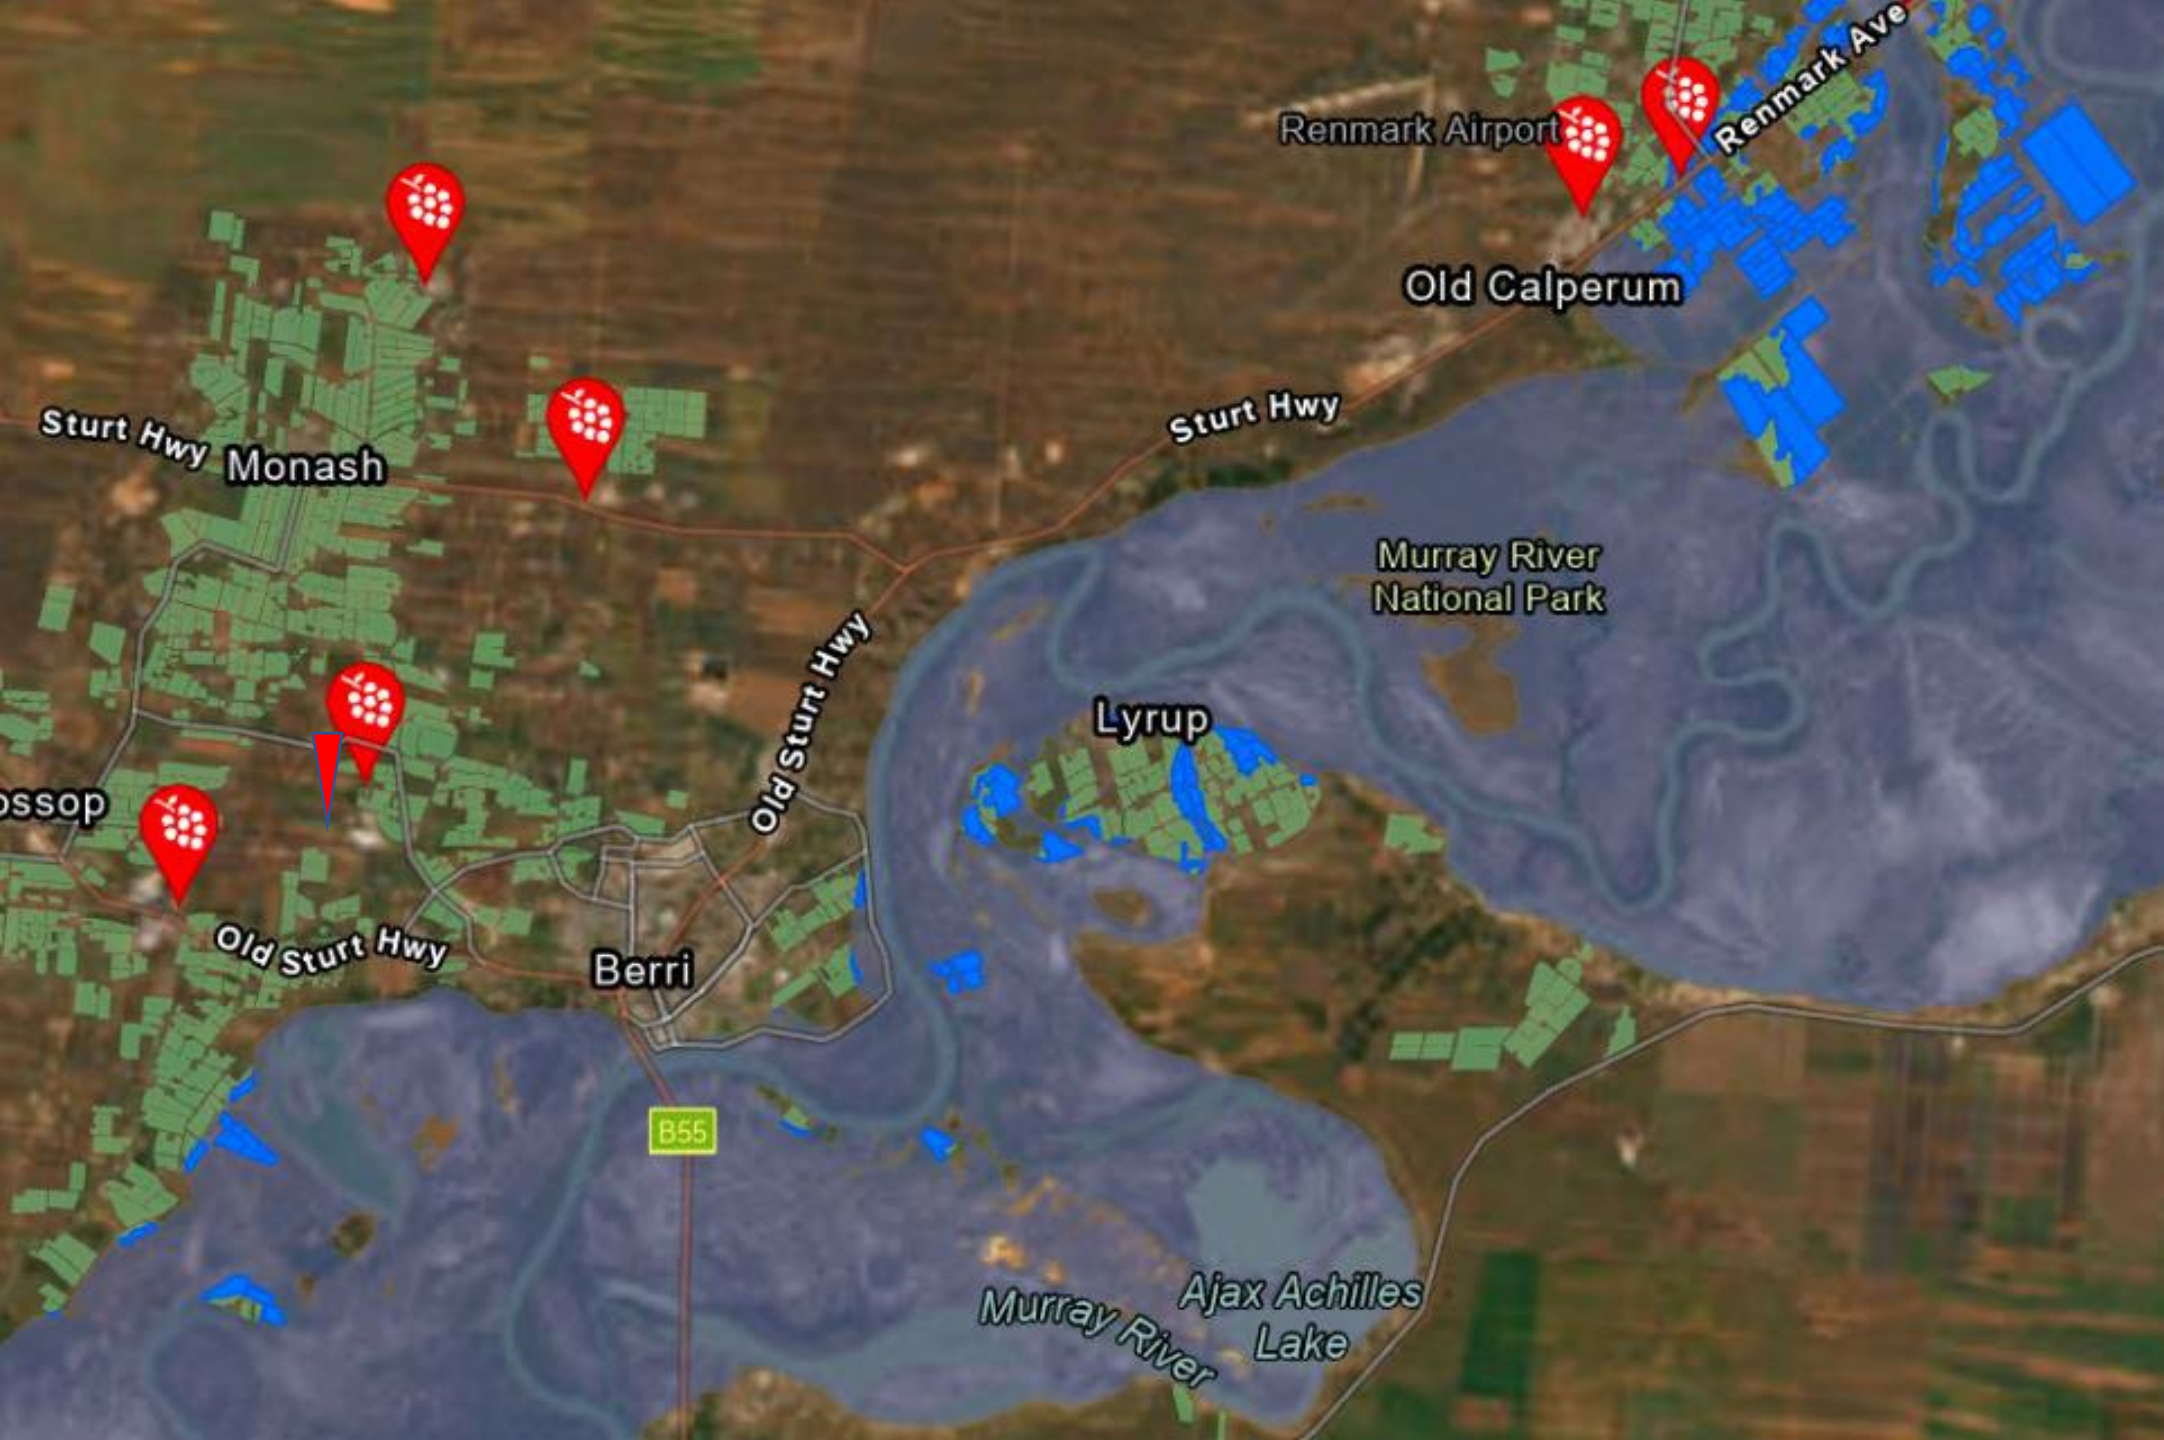

16<sup>TH</sup> December 2022

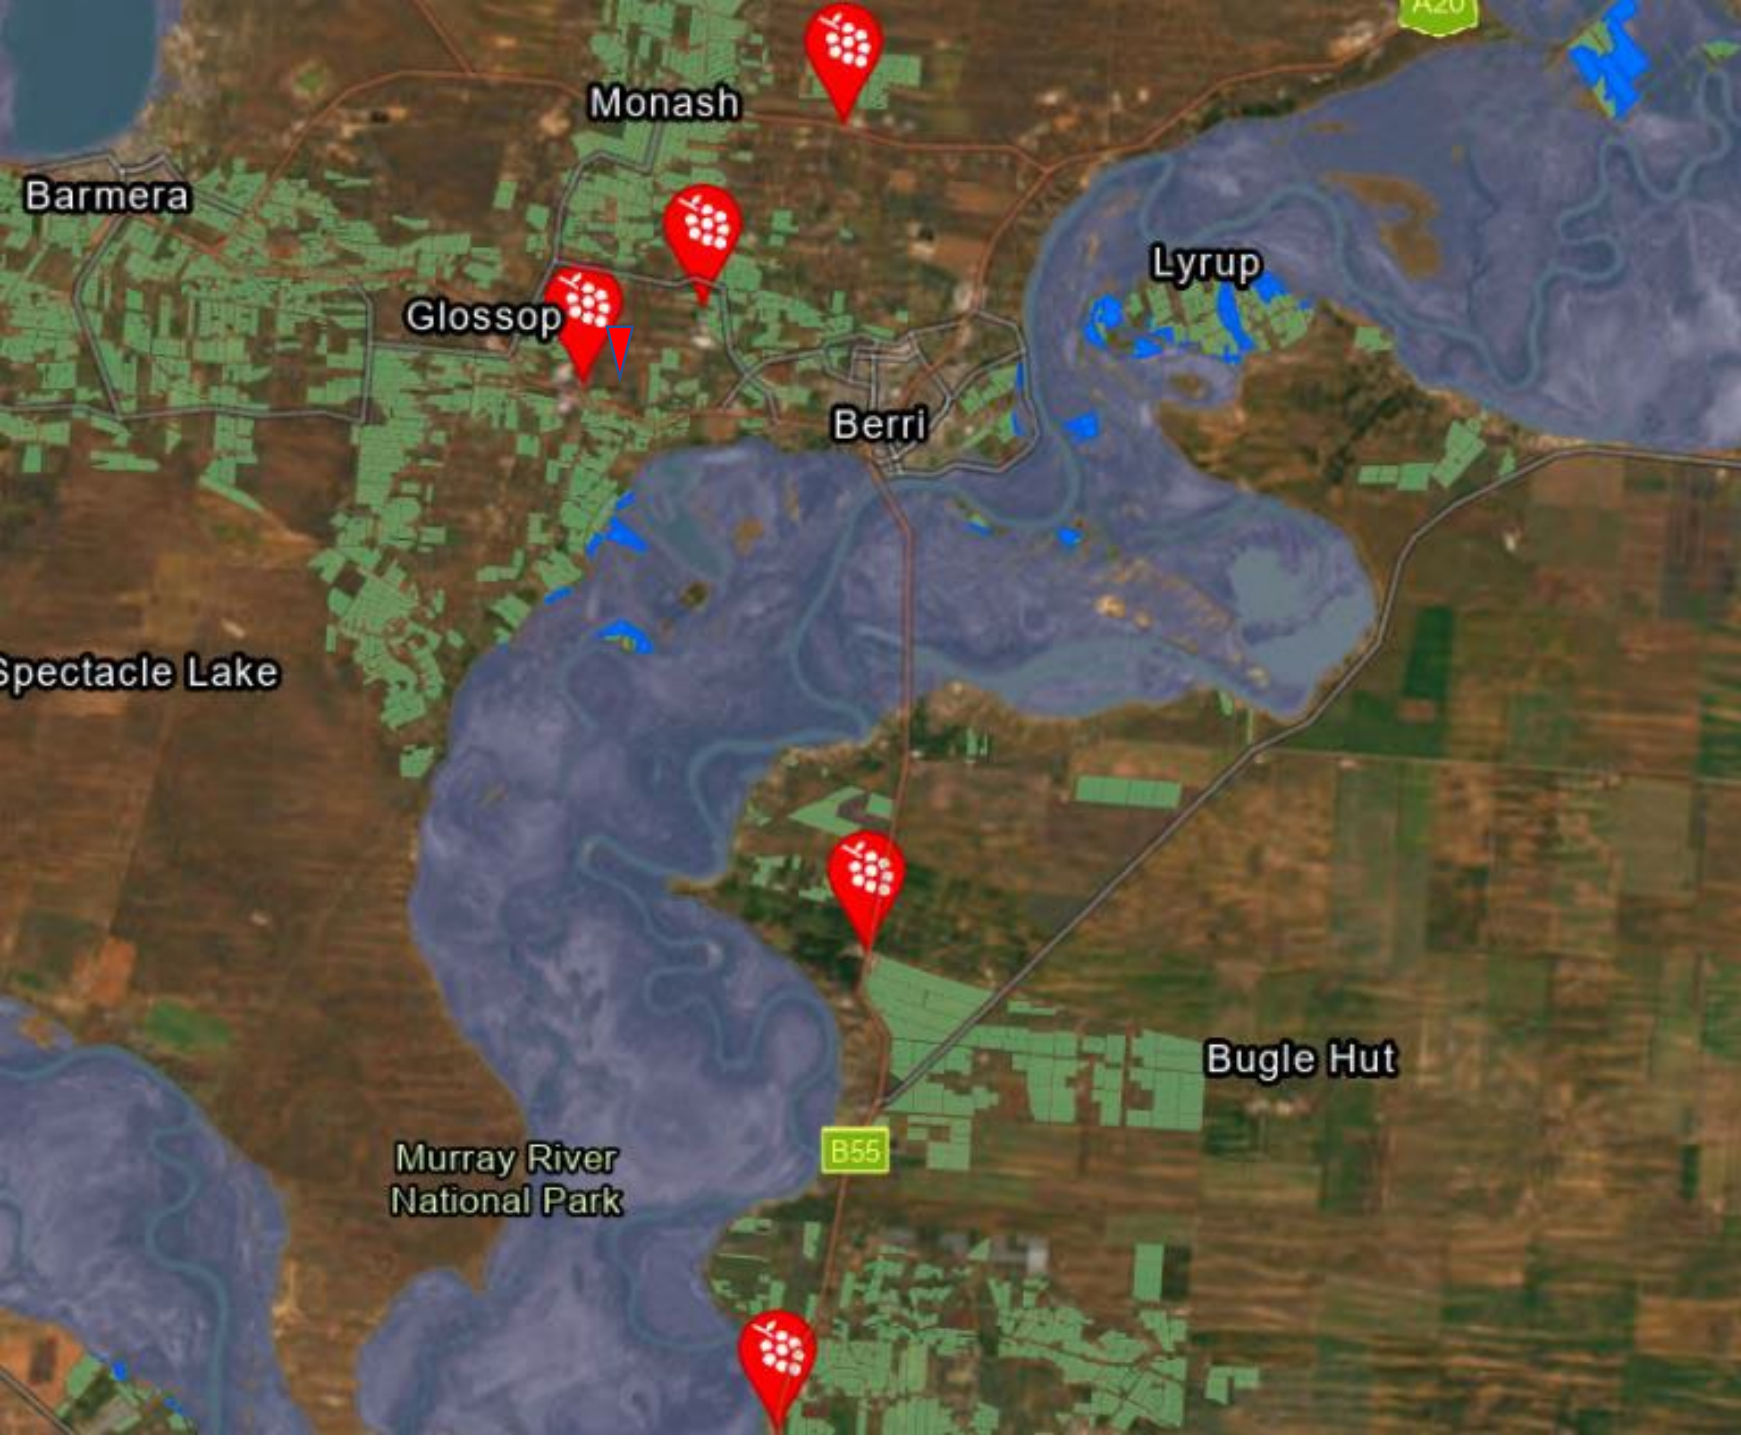

- The opaque blue-grey is the area predicted to flood based on flood modelling undertaken by **DEW in 2014 at 250 GL/day flow rate**. This model does not take into account levee bank and other flood mitigation works undertaken since the model was developed.
- The green area markings denote vineyard plantings.
- The solid blue markings denote potentially flooded areas of vineyards.
- Red markers represent wineries to the best of our knowledge and do not include all wine producers. Solid red markers old winery facilities.
